

SERIES 700 – SUPPORT SERVICES

Safety Program – 720

Buildings and Ground Inspections (721)

Safety inspections are one of the principal means of determining possible causes of accidents before they cause injury. Inspections should include the search for unsafe physical conditions and unsafe practices by staff and students. The inspection will be completed by the Head of Maintenance and the findings from the inspection will immediately be reported to the District Administrator.

Unsafe conditions will be identified and corrected as soon as possible.
